*The benchmark return and 3 year standard deviation for 2021 were computed using a blended benchmark. The FTSE 3 Month T Bill Index from 1/1/2021 - 4/30/2021 and then the Bloomberg U.S. Treasury Bellwethers: 3 Month Index from 5/1/2021 - 12/31/2021

Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

3. The USAA Ultra Short-Term Bond Fixed Income Composite includes all institutional and retail portfolios invested in high-quality securities, the interest of which is excludable from gross income for federal income tax purposes (referred to herein as "tax-exempt securities"), with remaining maturities of 397 days or less. During normal market conditions, at least 80% of the composite portfolio will consist of tax-exempt securities. In addition, during normal market conditions, at least 80% of the composite portfolio annual net investment income will be tax-exempt and excludable from the calculation of the federal alternative minimum tax ("AMT") for individual taxpayers. The strategy aims to deliver high current income consistent with preservation of principal. The composite creation date is July 2019 and the composite inception date is November 2010.
4. The benchmark of the composite is the Bloomberg U.S. Treasury Bellwethers: 3 Month Index. The index measures the performance of Treasury bills with a maturity of less than three months. The benchmark returns are provided to represent the investment environment existing during the time periods shown and are not covered by the report of independent verifiers. For comparison purposes, the index is fully invested, which includes the reinvestment of income. The returns have been taken from a published source and do not include any transaction fees, management fees, or other costs. Prior to 5/1/2021, the benchmark of this composite was the FTSE 3 Month T Bill Index.
5. The internal dispersion of annual returns is measured by the standard deviation of asset-weighted gross returns of accounts included in the composite for the full year. If less than six portfolios are included in the composite for the full year, no dispersion measure is presented, as it is not considered meaningful (N/M). The three-year annualized ex-post standard deviation measures the variability of the composite's gross returns and the benchmark returns over the preceding 36-month period. It is not required to be presented for annual periods prior to 2011 or when a full three years of composite performance is not yet available.
