

## Quarterly Highlights

- The RS Large Cap Growth Strategy returned -10.72% gross (-10.83% net) for the three months ended March 31, 2025, underperforming the Russell 1000® Growth Index,<sup>1</sup> which returned -9.97%.
- Strategy underperformance relative to the benchmark was largely driven by stock selection within the Technology sector; stock selection in the Financial Services sector offset a portion of the underperformance.
- Despite the challenging performance over the past few years for growth, large-cap growth stocks have outperformed their large-cap value counterparts over 5, 10, and 15 years as of March 31, 2025, per Russell.

## Market Performance / Fundamentals Snapshot

### Q1 2025 Market Performance

## Market Commentary

After two consecutive years of impressive 20%-plus annual returns for the broad market (as measured by the S&P 500® Index<sup>2</sup>), the bellwether large-cap index shed 4.3% during the first quarter. The tech-heavy Nasdaq Composite fared even worse, losing 10.3% during the quarter. This was the worst performance for these indexes since the second and third quarters of 2022, respectively.

The sharp decline in stocks and subsequent elevated volatility comes as no real surprise. In fact, the pullback began in earnest in December 2024 after post-election euphoria—and the expectation for pro-business policies—was largely replaced by declining investor sentiment. Investors wondered about President Trump’s commitment to installing and enforcing a wide range of tariffs. Was this a negotiating tactic given the steep trade imbalance that the U.S. has with most other countries? Would this encourage the repatriation of supply chains and boost domestic manufacturing? Or would this type of intervention usher in a new era of elevated inflation, put the brakes on global trade, and act as a headwind for corporate profits? The market despises such uncertainty, and thus we are not entirely surprised that investors became more risk-averse during the first quarter.

Monetary policy and the trajectory of interest rates have also been pain points for U.S. investors. Tariffs are, in effect, a form of taxation, and to the extent possible, future higher costs are likely to be passed on to consumers. This could have a ripple effect in terms

of inflation. The Federal Reserve has already signaled intentions to slow-roll future interest rate cuts, and if future CPI readings suggest the re-emergence of inflation, the Fed may be inclined to take an even slower path with regard to monetary policy.

In terms of investment styles, growth stocks underperformed their value counterparts during the first quarter. The uncertainties surrounding interest rates, as well as the strong run that many high-growth names had enjoyed over the past several years, made them somewhat vulnerable to a pullback. The Russell 3000® Growth Index<sup>3</sup> declined 10.0% during the first quarter. Large-cap growth stocks, represented by the Russell 1000® Growth Index, also pulled back by approximately 10% during the quarter as momentum finally seemed to be waning for the “Magnificent Seven.” Growth stocks also stumbled further down the cap spectrum. The Russell Midcap® Growth Index<sup>4</sup> declined 7.1% for the quarter, while small-cap growth stocks represented by the Russell 2000® Growth Index<sup>5</sup> declined 11.1% during the same period.

Despite the turmoil and uncertainty, we like to remind investors that volatility also breeds opportunity. We think this is especially true for active managers in the growth space with a long time horizon and a commitment to a proven investment philosophy. We acknowledge that headwinds linger, and “uncertainty” appears to be the theme of the moment. Nevertheless, we see many exciting growth companies—especially among the cohort of small- and mid-cap names—that ended the first quarter

with attractive relative valuations, in our opinion. Our team continues to focus on identifying potential opportunities within secular growth, and we believe that we are still in the early stages of a secular shift that is transforming how consumers, businesses, and employees interact. That trend, along with new emerging technologies (including artificial intelligence), is poised to have a significant impact in the years ahead, particularly among growth-oriented investment styles.

### Investment Strategy

The RS Large Cap Growth Strategy (the “Strategy”) is guided by our philosophy that sustainable earnings growth drives long-term share price appreciation. Our investment process is focused on finding innovative companies whose core business, we believe, can continue to grow over time.

The team seeks companies with products and services that are growing organically, creating new markets or taking market share from existing companies. We are focused on finding companies whose business values can appreciate regardless of the underlying market environment. The Strategy is led by the team’s chief investment officer, Scott Tracy, along with portfolio managers Steve Bishop, Melissa Chadwick-Dunn, Chris Clark, Paul Leung, and Trevor Martin. The six co-portfolio managers, as well as two research analysts, serve as sector specialists and are supported by two associates, drawing on strong relationships with industry experts and company management teams.

Together, we conduct over 2,000 company meetings each year through in-person meetings, conference calls, and trade shows. We then back up our findings through discussions with industry leaders and third-party sources. We are long-term investors and seek to establish definable “anchor points,” which are quantifiable metrics that help determine a company’s potential long-term growth trajectory. Anchor points arise from our analysis of a company’s long-term capabilities and performance goals over three to five years. These long-term anchor points serve as guideposts to help us measure a company’s progress as it executes its business strategy, regardless of what is taking place in the overall market, and help prevent distractions caused by short-term stock price movements and inevitable market volatility.

### Performance Review

The RS Large Cap Growth Strategy returned -10.72% gross (-10.83% net) for the three months ended March 31, 2025, underperforming the Russell 1000® Growth Index, which returned -9.97%. Strategy underperformance relative to the benchmark was largely driven by stock selection within the Technology sector; stock selection in the Financial Services sector offset a portion of the underperformance. Despite the challenging performance over the past few years for growth, large-cap growth stocks have outperformed their large-cap value counterparts over 5, 10, and 15 years as of March 31, 2025, per Russell.

### Top Detracting Sector: Technology

The largest detractor from performance within the Technology sector was Trade Desk (0.60% ending weight), a cloud-based ad-buying platform. While the Connected Television (CTV) market continues to be strong, Trade Desk (the leader in the market) underperformed primarily because of two idiosyncratic reasons: 1)

slower-than-anticipated rollout of its Kokai software upgrade, and 2) larger-than-anticipated disruption from its annual corporate restructuring. These events, coupled with renewed fears around competition from Amazon’s demand-side platform (Amazon DSP), pressured the stock in the quarter. While we are monitoring the evolving macro impacts on the advertising market, we believe that Trade Desk has largely addressed its internal issues, that Kokai adoption will catch up to internal expectations, and that competition is unchanged. We continue to hold a position.

### Top Contributing Sector: Financial Services

Within the Financial Services sector, one of the largest drivers of relative outperformance this quarter was digital payment services provider Visa, Inc. (4.08% ending weight), which facilitates global commerce through the transfer of value and information among a global network of consumers, merchants and financial institutions. Fundamentals remained very strong in the first quarter, as Visa, Inc. had a strong quarterly earnings report and 2025 outlook due to persistent strength in the domestic U.S. consumer. Visa benefits from inflationary tailwinds, a shift from paper currency to electronic payments, and a resilient consumer that uses their Visa cards for everyday, less discretionary items. We continue to hold the position.

### Market and Strategy Outlook

We remain cautiously optimistic about the health of the domestic economy and are excited about the prospect that the Federal Reserve has finally begun to meaningfully cut their benchmark rate to a more accommodative stance. U.S. employment remains strong, and the outlook for solid earnings growth in 2025 remains in place. While the full impact on the economy and employment from the recently announced tariffs is yet unclear, a slightly slower pace in economic activity, if coupled with solid consumer and business spending, could augur a very favorable backdrop for growth stocks. In addition, the potential for more deregulation, continued onshoring and re-shoring, and stronger GDP growth could make the U.S. a relative safe haven. Certain segments of the economy appear well positioned to continue to meaningfully outgrow GDP, while company valuations have become increasingly compelling for long-term investors.

In the current investment landscape, there continues to be a compelling opportunity for secular growth companies outside of the mega-cap growth category. Despite their relative underperformance since November 2020, smaller-cap secular growth companies have displayed continued strength in their underlying fundamentals. We expect this fundamental strength to persist and are optimistic that the valuation gap of smaller companies will narrow substantially with that of their larger-cap peers.

Overall, while we believe the interest rate and inflation picture is getting somewhat clearer, the engineering of a soft landing for the economy remains unclear. As such, we believe that opportunities will emerge in sectors and industries that demonstrate secular resilience through the cycle and sustained growth. We feel that secular growth companies within the growth universe are especially attractive relative to cyclicals due to their strong and consistent fundamentals and potential for outperformance.

Thank you for your continued investment.

Returns include reinvestment of dividends and capital gains. Performance returns for periods of less than one year are not annualized.

## Past performance does not guarantee future results.

Composite and benchmark returns are net of non-reclaimable withholding taxes, if any. Gross-of-fees returns are presented before management and custodial fees but after all trading expenses. Net-of-fees returns reflect gross performance less investment management fees. Net-of-fees returns are calculated by deducting one-twelfth of the highest tier of the standard fee schedule in effect for the period noted (the model fee). Net returns prior to 1/1/2017 were calculated using actual fees. Prior to 1/1/2013, net-of-fees performance for some accounts in the composite reflect the deduction of administrative and other fees in addition to management fees and transaction costs. The composite model fee for each period is either the highest tier of the current fee schedule or a higher value, whichever is required to ensure the model composite net-of-fee return is lower than or equal to the composite net-of-fee return calculated using actual fees. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size. The firm's fees are available on request and may be found on Part 2A of its Form ADV.

Index returns are provided to represent the investment environment during the periods shown. Index returns reflect the

reinvestment of dividends and capital gains but do not include advisory fees, transaction costs, or other expenses that would be incurred with an investment. One cannot invest directly in an index.

- 1 The Russell 1000<sup>®</sup> Growth Index is a market-capitalization-weighted index that measures the performance of those companies in the Russell 1000<sup>®</sup> Index (which consists of the 1,000 largest U.S. companies based on total market capitalization) with higher price-to-book ratios and higher forecasted growth values.
- 2 The S&P 500<sup>®</sup> Index is a market-capitalization-weighted index designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.
- 3 The Russell 3000<sup>®</sup> Growth Index is an unmanaged market-capitalization-weighted index that measures the performance of those companies in the Russell 3000<sup>®</sup> Index (which consists of the 3,000 largest U.S. companies based on total market capitalization) with higher price-to-book ratios and higher forecasted growth values.

- 4 The Russell Midcap® Growth Index is a market-capitalization-weighted index that measures the performance of those companies in the Russell Midcap® Index with higher price-to-book ratios and higher forecasted growth values.
- 5 The Russell 2000® Growth Index is a market-capitalization-weighted index that measures the performance of those companies in the Russell 2000® Index (which consists of the 2,000 smallest-cap companies in the Russell 3000® Index) with higher price-to-book ratios and higher forecasted growth values.
- 6 The Representative Account's holdings are allocated to each sector based on the Russell Global Sectors Standard (RGS). If a holding is not classified by Russell, it is assigned a Russell designation by RS Investments. Cash includes short-term investments and net other assets and liabilities.
- 7 Portfolio holdings are subject to change and should not be considered a recommendation to buy or sell individual securities.

**All investments carry a certain degree of risk, including the possible loss of principal**, and an investment should be made with an understanding of the risks involved with owning a particular security or asset class.

The opinions are as of the date indicated and are subject to change at any time due to changes in market or economic conditions. The comments should not be construed as a recommendation of individual holdings or market sectors, but as an illustration of broader themes.

The RS Large Cap Growth Composite invests principally in equity securities of large-capitalization growth companies. The benchmark is the Russell 1000® Growth Index. The composite was created in June 2009.

Information relating to portfolio holdings is based on the representative account in the composite and may vary for other accounts in the strategy due to asset size, client guidelines, and other factors. The representative account is believed to most closely reflect the current portfolio management style.
