Philosophy and Process

Emphasize and Innovation - Search for pioneering, disruptive businesses that we believe can change an industry to drive sustainable earnings growth over time.

Focus on the long term - Highlight companies that are aligned with the team's fundamental beliefs and that rank highly on key quantitative metrics.

Manage risk - Seek an attractive risk/reward profile at the time of purchase and deploy a three-stage risk management screen on all holdings to help mitigate the negative impact of any single position.

All investing involves risk, including potential loss of principal. In addition to the normal risks associated with investing, investments in small- and mid-cap companies typically exhibit higher volatility.

Active Share is a measure that compares the proportion of security holdings within the product against those of the respective benchmark. The value represents the percentage difference between fund and benchmark. **Alpha** is the excess return of a fund relative to the return of a benchmark index. **Beta** is a measure of the volatility, or systematic risk, of a security or portfolio relative to the market or a benchmark. **R-squared** is a statistical measure that represents the percentage of a fund's or security's movements that can be explained by movements in a benchmark index. **Portfolio Turnover Ratio – Last 12 Months (LTM)** is a measure of trading activity in a mutual fund portfolio of investments for the past year that indicates how often investments are bought and sold. Funds with high turnover may incur more transaction costs than funds with low turnover and may subject shareholders to taxable capital gains distributions.

Information Ratio is a measure of the value added per unit of active risk by a manager over the benchmark. The Information Ratio is calculated by dividing the annualized excess return over a benchmark by the annualized standard deviation of excess return. **Sharpe ratio** is the average return earned in excess of the risk-free rate per unit of volatility or total risk.

The **Russell 2500™ Growth Index** is an unmanaged market-capitalization-weighted index that measures the performance of those companies in the Russell 2500™ Index with higher price-to-book ratios and higher forecasted growth values.
